

Clojure Cheat Sheet (Clojure 1.4 - 1.7, sheet v27)

Documentation

clojure.repl/	doc find-doc apropos dir source pst javadoc (foo.bar/ is namespace for later syms)
---------------	--

Primitives

Numbers

Literals	Long: 7, hex 0xff, oct 017, base 2 2r1011, base 36 36rCRAZY BigInt: 7N Ratio: -22/7 Double: 2.78 -1.2e-5 BigDecimal: 4.2M
Arithmetic	+ - * / quot rem mod inc dec max min +’ -’ *’ inc’ dec’
Compare	== < > <= >= compare
Bitwise	bit-and bit-or bit-xor bit-not bit-flip bit-set bit-shift-right bit-shift-left bit-and-not bit-clear bit-test (1.6) unsigned-bit-shift-right (see BigInteger for integers larger than Long)
Cast	byte short int long float double bigdec bigint num rationalize biginteger
Test	zero? pos? neg? even? odd? number? rational? integer? ratio? decimal? float?
Random	rand rand-int
BigDecimal	with-precision
Unchecked	*unchecked-math* unchecked-add unchecked-dec unchecked-inc unchecked-multiply unchecked-negate unchecked-subtract

Strings

Create	str format "a string" "escapes \b\f\n\t\r\" octal \377 hex \ucafe" See also section IO/to string
Use	count get subs compare (clojure.string/) join escape split split-lines replace replace-first reverse (1.5) re-quote-replacement (String) .indexOf .lastIndexOf
Regex	#"pattern" re-find re-seq re-matches re-pattern re-matcher re-groups (clojure.string/) replace replace-first (1.5) re-quote-replacement
Letters	(clojure.string/) capitalize lower-case upper-case
Trim	(clojure.string/) trim trim-newline triml trimr
Test	char char? string? (clojure.string/) blank? (String) .startsWith .endsWith .contains

Other

Characters	char char-name-string char-escape-string literals: \a \newline (more at link)
Keywords	keyword keyword? find-keyword literals: :kw :my.ns/kw ::in-cur-ns
Symbols	symbol symbol? gensym literals: my-sym my.ns/foo
Misc	literals: true false nil

Collections

Collections

Generic ops	count empty not-empty into conj (clojure.walk/) walk prewalk prewalk-demo prewalk-replace postwalk postwalk-demo postwalk-replace
Content tests	distinct? empty? every? not-every? some not-any?
Capabilities	sequential? associative? sorted? counted? reversible?
Type tests	coll? list? vector? set? map? seq? (1.6) record?

Lists (conj, pop, & peek at beginning)

Create	() list list*
Examine	first nth peek .indexOf .lastIndexOf
‘Change’	cons conj rest pop

Vectors (conj, pop, & peek at end)

Create	[] vector vec vector-of mapv filterv
Examine	(my-vec idx) → (nth my-vec idx) get peek .indexOf .lastIndexOf
‘Change’	assoc pop subvec replace conj rseq update-in (1.7) update
Ops	reduce-kv

Sets

Create	#{} set hash-set sorted-set sorted-set-by (clojure.data.avl/) sorted-set sorted-set-by (flatland.ordered.set/) ordered-set
Examine	(my-set item) → (get my-set item) contains?
‘Change’	conj disj
Set ops	(clojure.set/) union difference intersection select See also section Relations
Test	(clojure.set/) subset? superset?
Sorted sets	rseq subseq rsubseq

Maps

Create	{ } hash-map array-map zipmap sorted-map sorted-map-by bean frequencies group-by (clojure.set/) index (clojure.data.avl/) sorted-map sorted-map-by (flatland.ordered.map/) ordered-map (clojure.data.priority-map/) priority-map (flatland.useful.map/) ordering-map
Examine	(my-map k) → (get my-map k) also (:key my-map) → (get my-map :key) get-in contains? find keys vals
‘Change’	assoc assoc-in dissoc merge merge-with select-keys update-in (1.7) update (clojure.set/) rename-keys map-invert GitHub: Medley
Ops	reduce-kv
Entry	key val
Sorted maps	rseq subseq rsubseq

Queues (conj at end, peek & pop from beginning)

Create	clojure.lang.PersistentQueue/EMPTY (no literal syntax or constructor fn)
Examine	peek
‘Change’	conj pop

Relations (set of maps, each with same keys, aka rels)

Rel algebra	(clojure.set/) join select project union difference intersection index rename
-------------	---

Transients (clojure.org/transients)

Create	transient persistent!
Change	conj! pop! assoc! dissoc! disj! Note: always use return value for later changes, never original!

Misc

Compare	= identical? not= not compare clojure.data/diff
Test	true? false? instance? nil? (1.6) some?

Sequences

Creating a Lazy Seq

From collection	seq vals keys rseq subseq rsubseq sequence
From producer fn	lazy-seq repeatedly iterate
From constant	repeat range
From other	file-seq line-seq resultset-seq re-seq tree-seq xml-seq iterator-seq enumeration-seq
From seq	keep keep-indexed

Seq in, Seq out

Get shorter	distinct filter remove take-nth for
Get longer	cons conj concat lazy-cat mapcat cycle interleave interpose
Tail-items	rest nthrest next fnext nnext drop drop-while take-last for
Head-items	take take-while butlast drop-last for
‘Change’	conj concat distinct flatten group-by partition partition-all partition-by split-at split-with filter remove replace shuffle
Rearrange	reverse sort sort-by compare
Process items	map pmap map-indexed mapcat for replace seque

Using a Seq

Extract item	first second last rest next ffirst nfirst fnext nnext nth nthnext rand-nth when-first max-key min-key
Construct coll	zipmap into reduce reductions set vec into-array to-array-2d mapv filterv
Pass to fn	apply
Search	some filter
Force evaluation	doseq dorun doall (1.7) run!
Check for forced	realized?

Transducers (clojure.org/transducers)

Off the shelf	map mapcat filter remove take take-while take-nth drop drop-while replace partition-by partition-all keep keep-indexed map-indexed distinct interpose (1.7) cat dedupe random-sample
Create your own	(1.7) completing ensure-reduced unreduced See also section Concurrency/Volatiles
Use	into sequence (1.7) transduce eduction
Early termination	reduced reduced? deref

Zippers (clojure.zip/)

Create	zipper seq-zip vector-zip xml-zip
Get loc	up down left right leftmost rightmost
Get seq	lefts rights path children
‘Change’	make-node replace edit insert-child insert-left insert-right append-child remove
Move	next prev
Misc	root node branch? end?

IO

to/from ...	spit slurp (to writer/from reader, Socket, string with file name, URL, etc.)
to *out*	pr prn print printf println newline (clojure.pprint/) print-table
to writer	(clojure.pprint/) pprint cl-format also: (binding [*out* writer] ...)
to string	format with-out-str pr-str prn-str print-str println-str
from *in*	read-line (clojure.tools.reader.edn/) read
from reader	line-seq (clojure.tools.reader.edn/) read also: (binding [*in* reader] ...) java.io.Reader
from string	with-in-str (clojure.tools.reader.edn/) read-string
Open	with-open (clojure.java.io/) text: reader writer binary: input-stream output-stream
Binary	(.write ostream byte-arr) (.read istream byte-arr) java.io.OutputStream java.io.InputStream GitHub: gloss byte-spec
Misc	flush (.close s) file-seq *in* *out* *err* (clojure.java.io/) file copy delete-file resource as-file as-url as-relative-path GitHub: fs
Data readers	*data-readers* default-data-readers (1.5) *default-data-reader-fn*

Functions

Create	<code>fn</code> <code>defn</code> <code>defn-</code> <code>definline</code> <code>identity</code> <code>constantly</code> <code>memfn</code> <code>comp</code> <code>complement</code> <code>partial</code> <code>juxt</code> <code>memoize</code> <code>fn!</code> <code>every-pred</code> <code>some-fn</code>
Call	<code>apply</code> <code>-></code> <code>->></code> <code>trampoline</code> (1.5) <code>as-></code> <code>cond-></code> <code>cond->></code> <code>some-></code> <code>some->></code>
Test	<code>fn?</code> <code>ifn?</code>

Abstractions (Clojure type selection flowchart)

Protocols (clojure.org/protocols)

Define	(<code>defprotocol</code> <code>Slicey</code> (<code>slice</code> [<code>at</code>]))
Extend	(<code>extend-type</code> <code>String</code> <code>Slicey</code> (<code>slice</code> [<code>at</code>] ...))
Extend null	(<code>extend-type</code> <code>nil</code> <code>Slicey</code> (<code>slice</code> [<code>_</code>] <code>nil</code>))
Reify	(<code>reify</code> <code>Slicey</code> (<code>slice</code> [<code>at</code>] ...))
Test	<code>satisfies?</code> <code>extends?</code>
Other	<code>extend</code> <code>extend-protocol</code> <code>extenders</code>

Records (clojure.org/datatypes)

Define	(<code>defrecord</code> <code>Pair</code> [<code>h</code> <code>t</code>])
Access	(: <code>h</code> (<code>Pair.</code> 1 2)) \rightarrow 1
Create	<code>Pair.</code> <code>-></code> <code>Pair</code> <code>map-></code> <code>Pair</code>
Test	<code>record?</code>

Types (clojure.org/datatypes)

Define	(<code>deftype</code> <code>Pair</code> [<code>h</code> <code>t</code>])
Access	(. <code>h</code> (<code>Pair.</code> 1 2)) \rightarrow 1
Create	<code>Pair.</code> <code>-></code> <code>Pair</code>
	(<code>deftype</code> <code>Pair</code> [<code>h</code> <code>t</code>])
With methods	<code>Object</code>
	(<code>toString</code> [<code>this</code>] (<code>str</code> "<" <code>h</code> " ," <code>t</code> ">"))

Multimethods (clojure.org/multimethods)

Define	(<code>defmulti</code> <code>my-mm</code> <code>dispatch-fn</code>)
Method define	(<code>defmethod</code> <code>my-mm</code> : <code>dispatch-value</code> [<code>args</code>] ...)
Dispatch	<code>get-method</code> <code>methods</code>
Remove	<code>remove-method</code> <code>remove-all-methods</code>
Prefer	<code>prefer-method</code> <code>prefers</code>
Relation	<code>derive</code> <code>underive</code> <code>isa?</code> <code>parents</code> <code>ancestors</code> <code>descendants</code> <code>make-hierarchy</code>

Macros

Create	<code>defmacro</code> <code>definline</code>
Debug	<code>macroexpand-1</code> <code>macroexpand</code> (<code>clojure.walk/</code>) <code>macroexpand-all</code>
Branch	<code>and</code> <code>or</code> <code>when</code> <code>when-not</code> <code>when-let</code> <code>when-first</code> <code>if-not</code> <code>if-let</code> <code>cond</code> <code>condp</code> <code>case</code> (1.6) <code>when-some</code> <code>if-some</code>
Loop	<code>for</code> <code>doseq</code> <code>dotimes</code> <code>while</code>
Arrange	<code>..</code> <code>doto</code> <code>-></code> <code>->></code> (1.5) <code>as-></code> <code>cond-></code> <code>cond->></code> <code>some-></code> <code>some->></code>
Scope	<code>binding</code> <code>locking</code> <code>time</code> <code>with-in-str</code> <code>with-local-vars</code> <code>with-open</code> <code>with-out-str</code> <code>with-precision</code> <code>with-redefs</code> <code>with-redefs-fn</code>
Lazy	<code>lazy-cat</code> <code>lazy-seq</code> <code>delay</code>
Doc.	<code>assert</code> <code>comment</code> <code>doc</code>

Reader Macros (clojure.org/reader)

'	<code>quote</code> : ' <code>form</code> \rightarrow (<code>quote</code> <code>form</code>)
\	Character literal
;	Single line comment
~	Metadata (see Metadata section)
@	<code>Deref</code> : @ <code>form</code> \rightarrow (<code>deref</code> <code>form</code>)
'	<code>Syntax-quote</code>
~	<code>Unquote</code>
~@	<code>Unquote-splicing</code>
#" <i>p</i> "	<code>Regex Pattern</code> <i>p</i> (see Strings/Regex section)
#'	<code>Var-quote</code> # <code>x</code> \rightarrow (<code>var</code> <code>x</code>)
#()	<code>Anonymous function literal</code> : # (...) \rightarrow (<code>fn</code> [<code>args</code>] (...))
#_	<code>Ignore next form</code>
#?	(1.7) <code>Reader conditional</code> : # ? (: <code>clj</code> <code>x</code> : <code>cljs</code> <code>y</code>) reads as <code>x</code> on JVM, <code>y</code> in ClojureScript, nothing elsewhere. Other keys: : <code>cljr</code> : <code>default</code>
#?@	(1.7) <code>Splicing reader conditional</code> : [1 # ? @ (: <code>clj</code> [<code>x</code> <code>y</code>] : <code>cljs</code> [<code>w</code> <code>z</code>]) 3] reads as [1 <code>x</code> <code>y</code> 3] on JVM, [1 <code>w</code> <code>z</code> 3] in ClojureScript, [1 3] elsewhere.

Metadata (clojure.org/reader, special_forms)

General	<code>^</code> { : <code>key1</code> <code>val1</code> : <code>key2</code> <code>val2</code> ... }
Abbrevs	<code>^Type</code> \rightarrow <code>^</code> { : <code>tag</code> <code>Type</code> } , <code>^</code> : <code>key</code> \rightarrow <code>^</code> { : <code>key</code> <code>true</code> }
Common	<code>^</code> : <code>dynamic</code> <code>^</code> : <code>private</code> <code>^</code> : <code>doc</code> <code>^</code> : <code>const</code>
Examples	(<code>defn</code> <code>^</code> : <code>private</code> <code>^String</code> <code>my-fn</code> ...) (<code>def</code> <code>^</code> : <code>dynamic</code> <code>*dyn-var*</code> <code>val</code>)
On Vars	<code>meta</code> <code>with-meta</code> <code>vary-meta</code> <code>alter-meta!</code> <code>reset-meta!</code> <code>doc</code> <code>find-doc</code> <code>test</code>

Special Forms (clojure.org/special_forms)

<code>def</code> <code>if</code> <code>do</code> <code>let</code> <code>letfn</code> <code>quote</code> <code>var</code> <code>fn</code> <code>loop</code> <code>recur</code> <code>set!</code> <code>throw</code> <code>try</code> <code>monitor-enter</code> <code>monitor-exit</code>	
Binding Forms /	(examples) <code>let</code> <code>fn</code> <code>defn</code> <code>defmacro</code> <code>loop</code> <code>for</code> <code>doseq</code>
Destructuring	<code>if-let</code> <code>when-let</code> (1.6) <code>if-some</code> <code>when-some</code>

Vars and global environment (clojure.org/vars)

Def variants	<code>def</code> <code>defn</code> <code>defn-</code> <code>definline</code> <code>defmacro</code> <code>defmethod</code> <code>defmulti</code> <code>defonce</code> <code>defrecord</code>
Interned vars	<code>declare</code> <code>intern</code> <code>binding</code> <code>find-var</code> <code>var</code>
Var objects	<code>with-local-vars</code> <code>var-get</code> <code>var-set</code> <code>alter-var-root</code> <code>var?</code> <code>bound?</code> <code>thread-bound?</code>
Var validators	<code>set-validator!</code> <code>get-validator</code>

Namespace

Current	<code>*ns*</code>
Create/Switch	(tutorial) <code>ns</code> <code>in-ns</code> <code>create-ns</code>
Add	<code>alias</code> <code>def</code> <code>import</code> <code>intern</code> <code>refer</code>
Find	<code>all-ns</code> <code>find-ns</code>
Examine	<code>ns-name</code> <code>ns-aliases</code> <code>ns-map</code> <code>ns-interns</code> <code>ns-publics</code> <code>ns-refers</code> <code>ns-imports</code>
From symbol	<code>resolve</code> <code>ns-resolve</code> <code>namespace</code> <code>the-ns</code>
Remove	<code>ns-unalias</code> <code>ns-unmap</code> <code>remove-ns</code>

Loading

Load libs	(tutorial) <code>require</code> <code>use</code> <code>import</code> <code>refer</code>
List loaded	<code>loaded-libs</code>
Load misc	<code>load</code> <code>load-file</code> <code>load-reader</code> <code>load-string</code>

Concurrency

Atoms	<code>atom</code> <code>swap!</code> <code>reset!</code> <code>compare-and-set!</code>
Futures	<code>future</code> <code>future-call</code> <code>future-done?</code> <code>future-cancel</code> <code>future-cancelled?</code> <code>future?</code>
Threads	<code>bound-fn</code> <code>bound-fn*</code> <code>get-thread-bindings</code> <code>push-thread-bindings</code> <code>pop-thread-bindings</code> <code>thread-bound?</code>
Volatiles	(1.7) <code>volatile!</code> <code>vreset!</code> <code>vswap!</code> <code>volatile?</code>
Misc	<code>locking</code> <code>pcalls</code> <code>pvalues</code> <code>mpmap</code> <code>seque</code> <code>promise</code> <code>deliver</code>

Refs and Transactions (clojure.org/refs)

Create	<code>ref</code>
Examine	<code>deref</code> @ (@ <code>form</code> \rightarrow (<code>deref</code> <code>form</code>))
Transaction	<code>sync</code> <code>dosync</code> <code>io!</code>
In transaction	<code>ensure</code> <code>ref-set</code> <code>alter</code> <code>commute</code>
Validators	<code>set-validator!</code> <code>get-validator</code>
History	<code>ref-history-count</code> <code>ref-min-history</code> <code>ref-max-history</code>

Agents and Asynchronous Actions (clojure.org/agents)

Create	<code>agent</code>
Examine	<code>agent-error</code>
Change state	<code>send</code> <code>send-off</code> <code>restart-agent</code> (1.5) <code>send-via</code> <code>set-agent-send-executor!</code> <code>set-agent-send-off-executor!</code>
Block waiting	<code>await</code> <code>await-for</code>
Ref validators	<code>set-validator!</code> <code>get-validator</code>
Watchers	<code>add-watch</code> <code>remove-watch</code>
Thread handling	<code>shutdown-agents</code>
Error	<code>error-handler</code> <code>set-error-handler!</code> <code>error-mode</code> <code>set-error-mode!</code>
Misc	<code>*agent*</code> <code>release-pending-sends</code>

Java Interoperation (clojure.org/java_interop)

General	<code>..</code> <code>doto</code> <code>Classname/</code> <code>Classname.</code> <code>new</code> <code>bean</code> <code>comparator</code> <code>enumeration-seq</code> <code>import</code> <code>iterator-seq</code> <code>memfn</code> <code>set!</code> <code>class</code> <code>class?</code> <code>bases</code> <code>supers</code> <code>type</code> <code>gen-class</code> <code>gen-interface</code> <code>definterface</code>
Cast	<code>boolean</code> <code>byte</code> <code>short</code> <code>char</code> <code>int</code> <code>long</code> <code>float</code> <code>double</code> <code>bigdec</code> <code>bigint</code> <code>num</code> <code>cast</code> <code>biginteger</code>
Exceptions	<code>throw</code> <code>try</code> <code>catch</code> <code>finally</code> <code>pst</code> <code>ex-info</code> <code>ex-data</code>

Arrays

Create	<code>make-array</code> <code>object-array</code> <code>boolean-array</code> <code>byte-array</code> <code>short-array</code> <code>char-array</code> <code>int-array</code> <code>long-array</code> <code>float-array</code> <code>double-array</code> <code>clone</code> <code>to-array</code> <code>to-array-2d</code> <code>into-array</code>
Use	<code>aget</code> <code>aset</code> <code>aset-boolean</code> <code>aset-byte</code> <code>aset-short</code> <code>aset-char</code> <code>aset-int</code> <code>aset-long</code> <code>aset-float</code> <code>aset-double</code> <code>alength</code> <code>amap</code> <code>areduce</code>
Cast	<code>booleans</code> <code>bytes</code> <code>shorts</code> <code>chars</code> <code>ints</code> <code>longs</code> <code>floats</code> <code>doubles</code>

Proxy (Clojure type selection flowchart)

Create	<code>proxy</code> <code>get-proxy-class</code> <code>construct-proxy</code> <code>init-proxy</code>
Misc	<code>proxy-mappings</code> <code>proxy-super</code> <code>update-proxy</code>

Other

XML	<code>clojure.xml/parse</code> <code>xml-seq</code>
REPL	<code>*1</code> <code>*2</code> <code>*3</code> <code>*e</code> <code>*print-dup*</code> <code>*print-length*</code> <code>*print-level*</code> <code>*print-meta*</code> <code>*print-readably*</code> <code>*compile-files*</code> <code>*compile-path*</code> <code>*file*</code> <code>*warn-on-reflection*</code>
Code	<code>compile</code> <code>loaded-libs</code> <code>test</code>
Misc	<code>eval</code> <code>force</code> <code>hash</code> <code>name</code> <code>*clojure-version*</code> <code>clojure-version</code> <code>*command-line-args*</code>
Browser / Shell	(<code>clojure.java/browse/</code>) <code>browse-url</code> (<code>clojure.java/shell/</code>) <code>sh</code> <code>with-sh-dir</code> <code>with-sh-env</code>
