

Clojure Cheat Sheet (Clojure 1.3.0, sheet v1.2)

Documentation

clojure.repl/ doc find-doc apropos source pst javadoc
(foo.bar/ is namespace for following symbols)

Primitives

Numbers

Arithmetic	+ - * / quot rem mod inc dec max min
Compare	= == not= < > <= >= compare
Bitwise	bit-and, or, xor, not, flip, set, shift-right, shift-left, and-not, clear, test}
Cast	byte short int long float double bigdec bigint num rationalize
Test	nil? identical? zero? pos? neg? even? odd?
Random	rand rand-int
BigInt	with-precision
Unchecked	unchecked-{add, dec, divide, inc, multiply, negate, remainder, subtract}-int

Strings

Create	str format See also IO/to string
Use	count get subs compare (clojure.string/) join escape split split-lines replace replace-first reverse
Regex	#"pattern" re-find re-seq re-matches re-pattern re-matcher re-groups replace replace-first
Letters	(clojure.string/) capitalize lower-case upper-case
Trim	(clojure.string/) trim trim-newline triml trimr
Cast/Test	char char? string? (clojure.string/) blank?

Other

Characters	char char-name-string char-escape-string
Keywords	keyword keyword? find-keyword
Symbols	symbol symbol? gensym

Collections

Collections

Generic ops	count empty not-empty into conj
Content tests	distinct? empty? every? not-every? some not-any?
Capabilities	sequential? associative? sorted? counted? reversible?
Type tests	coll? list? vector? set? map? seq?

Lists

Create	'() list list*
Examine	first nth peek
'Change'	cons conj rest pop

Vectors

Create	[] vector vec vector-of
Examine	(my-vec idx) → (nth my-vec idx) get peek
'Change'	assoc pop subvec replace conj rseq

Sets

Create	#{} set hash-set sorted-set sorted-set-by
Examine	(my-set item) → (get my-set item) contains?
'Change'	conj disj
Rel algebra	(clojure.set/) join select project union difference intersection
Get map	(clojure.set/) index rename-keys rename map-invert
Test	(clojure.set/) subset? superset?

Maps

Create	{ } hash-map array-map zipmap sorted-map sorted-map-by bean frequencies
Examine	(:key my-map) → (get my-map :key) get-in contains? find keys vals
'Change'	assoc assoc-in dissoc merge merge-with select-keys update-in
Entry	key val
Sorted maps	rseq subseq rsubseq

Transients

Create	transient persistent!
Change	conj! pop! assoc! dissoc! disj! Remember to bind result to a symbol!

Misc

Compare	= == identical? not= not compare clojure.data/diff
Test	true? false? nil? instance?

Sequences

Creating a Lazy Seq

From collection	seq vals keys rseq subseq rsubseq
From producer fn	lazy-seq repeatedly iterate
From constant	repeat range
From other	file-seq line-seq resultset-seq re-seq tree-seq xml-seq iterator-seq enumeration-seq
From seq	keep keep-indexed

Seq in, Seq out

Get shorter	distinct filter remove for
Get longer	cons conj concat lazy-cat mapcat cycle interleave interpose
Tail-items	rest nthrest fnext nnext drop drop-while for
Head-items	take take-nth take-while take-last butlast drop-last for
'Change'	conj concat distinct flatten group-by partition partition-all partition-by split-at split-with filter remove replace shuffle
Rearrange	reverse sort sort-by compare
Process items	map pmap map-indexed mapcat for replace seque

Using a Seq

Extract item	first second last rest next ffirst nfirst fnext nnext nth nthnext rand-nth when-first max-key min-key
Construct coll	zipmap into reduce reductions set vec into-array to-array-2d
Pass to fn	apply
Search	some filter
Force evaluation	doseq dorun doall
Check for forced	realized?

Zippers (clojure.zip/)

Create	zipper
Get zipper	seq-zip vector-zip xml-zip
Get location	up down left right leftmost rightmost
Get seq	lefts rights path children
'Change'	make-node replace edit insert-child insert-left insert-right append-child remove
Move	next prev
Misc	root node branch? end?

IO

to/from ...	spit slurp (to writer/from reader, Socket, string with file name, URI, etc.)
to *out*	pr prn print printf println newline (clo- jure.pprint/) print-table
to writer	(clojure.pprint/) pprint cl-format also: (binding [*out* writer] ...)
to string	format with-out-str pr-str prn-str print-str println-str
from *in*	read-line read
from reader	line-seq also: (binding [*in* reader] ...) java.io.Reader
from string	read-string with-in-str
Open	with-open (clojure.java.io/) text: reader writer binary: input-stream output-stream
Binary	(.write ostream byte-arr) (.read istream byte-arr) java.io.OutputStream java.io.InputStream github: gloss byte-spec
Misc	flush (.close s) file-seq *in* *out* *err*

Special Forms

```
def if do let quote var fn loop recur throw try  
monitor-enter monitor-exit
```

Functions

Create	fn defn defn- definline identity constantly memfn comp complement partial juxt memoize fnil every-pred some-fn
Call	-> -> apply
Test	fn? ifn?

Abstractions

Protocols (clojure.org/protocols)

Define	(defprotocol Slicey (slice [at]))
Extend	(extend-type String Slicey (slice [at] ...))
Extend null	(extend-type nil Slicey (slice [_] nil))
Reify	(reify Slicey (slice [at] ...))

Records (clojure.org/datatypes)

Define	(defrecord Pair [h t])
Access	(:h (Pair. 1 2)) → 1
Create	Pair. ->Pair map->Pair

Types (clojure.org/datatypes)

Define	(deftype Pair [h t])
Access	(.h (Pair. 1 2)) → 1
Create	Pair. ->Pair
	(deftype Pair [h t]
With methods	Object (toString [this] (str "<" h "," t ">")))

Multimethods (clojure.org/multimethods)

Define	(defmulti my-mm dispatch-fn)
Method define	(defmethod my-mm :dispatch-value [args] ...)
Dispatch	get-method methods
Remove	remove-method remove-all-methods
Prefer	prefer-method prefers
Relation	derive isa? parents ancestors descendants make-hierarchy

Macros

Create	defmacro definline macroexpand-1 macroexpand
Branch	and or when when-not when-let when-first if-not if-let cond condp case
Loop	for doseq dotimes while
Arrange	.. doto ->
Scope	binding locking time with-in-str with-local-vars with-open with-out-str with-precision with-redefs with-redefs-fn
Lazy	lazy-cat lazy-seq delay
Document	assert comment doc

Reader Macros

'	Quote 'form → (quote form)
\	Character literal
;	Single line comment
~	Metadata (see Metadata section)
@	Deref @form → (deref form)
'	Syntax-quote
~	Unquote
~@	Unquote-splicing
#"p"	Regex Pattern p
#'	Var quote #'x → (var x)
#()	#(...) → (fn [args] (...))
#_	Ignore next form

Metadata (clojure.org/special_forms)

General	^{:key1 val1 :key2 val2 ...}
Abbrevs	^Type → ^{:tag Type}, ^:key → ^{:key true}
Common	^:dynamic ^:private ^:static
Example	(defn ^:private ^:static ^String my-fn ...) (def ^:dynamic *dyn-var* val)
Others	:added :author :arglists :doc :inline :inline-arities :macro
On Vars	meta with-meta vary-meta alter-meta! reset-meta! doc find-doc test

Vars and global environment

Def variants	<code>def</code> <code>defn</code> <code>defn-</code> <code>definline</code> <code>defmacro</code> <code>defmethod</code> <code>defmulti</code> <code>defonce</code> <code>defrecord</code>
Interned vars	<code>declare</code> <code>intern</code> <code>binding</code> <code>find-var</code> <code>var</code>
Var objects	<code>with-local-vars</code> <code>var-get</code> <code>var-set</code> <code>alter-var-root</code> <code>var?</code>
Var validators	<code>set-validator!</code> <code>get-validator</code>

Namespace

Current	<code>*ns*</code>
Create/Switch	<code>in-ns</code> <code>ns</code> <code>create-ns</code>
Add	<code>alias</code> <code>def</code> <code>import</code> <code>intern</code> <code>refer</code>
Find	<code>all-ns</code> <code>find-ns</code>
Examine	<code>ns-name</code> <code>ns-aliases</code> <code>ns-map</code> <code>ns-interns</code> <code>ns-publics</code> <code>ns-refers</code> <code>ns-imports</code>
From symbol	<code>resolve</code> <code>ns-resolve</code> <code>namespace</code>
Remove	<code>ns-unalias</code> <code>ns-unmap</code> <code>remove-ns</code>

Loading

Loading libs	<code>require</code> <code>use</code> <code>import</code> <code>refer</code>
Listing loaded libs	<code>loaded-libs</code>
Loading misc	<code>load</code> <code>load-file</code> <code>load-reader</code> <code>load-string</code>

Concurrency

Atoms	<code>atom</code> <code>swap!</code> <code>reset!</code> <code>compare-and-set!</code>
Futures	<code>future</code> <code>future-call</code> <code>future-done?</code> <code>future-cancel</code> <code>future-cancelled?</code> <code>future?</code>
Threads	<code>bound-fn</code> <code>bound-fn*</code> <code>get-thread-bindings</code> <code>push-thread-bindings</code> <code>pop-thread-bindings</code> <code>thread-bound?</code>
Misc	<code>locking</code> <code>pcalls</code> <code>pvalues</code> <code>pmap</code> <code>seque</code> <code>promise</code> <code>deliver</code>

Refs and Transactions

Create	<code>ref</code>
Examine	<code>deref</code> <code>@</code> (<code>@form</code> \rightarrow (<code>deref</code> <code>form</code>))
Transaction macros	<code>sync</code> <code>dosync</code> <code>io!</code>
In transaction	<code>ensure</code> <code>ref-set</code> <code>alter</code> <code>commute</code>
Validators	<code>set-validator!</code> <code>get-validator</code>
History	<code>ref-history-count</code> <code>ref-max-history</code> <code>ref-min-history</code>

Agents and Asynchronous Actions

Create	<code>agent</code>
Examine	<code>agent-error</code>
Change state	<code>send</code> <code>send-off</code> <code>restart-agent</code>
Block waiting	<code>await</code> <code>await-for</code>
Ref validators	<code>set-validator!</code> <code>get-validator</code>
Watchers	<code>add-watch</code> <code>remove-watch</code>
Thread handling	<code>shutdown-agents</code>
Error	<code>error-handler</code> <code>set-error-handler!</code> <code>error-mode</code> <code>set-error-mode!</code>
Misc	<code>*agent*</code> <code>release-pending-sends</code>

Java Interoperation

General	<code>..</code> <code>doto</code> <code>Classname/</code> <code>Classname.</code> <code>new</code> <code>bean</code> <code>comparator</code> <code>enumeration-seq</code> <code>import</code> <code>iterator-seq</code> <code>memfn</code> <code>set!</code>
Cast	<code>boolean</code> <code>byte</code> <code>short</code> <code>char</code> <code>int</code> <code>long</code> <code>float</code> <code>double</code> <code>bigdec</code> <code>bigint</code> <code>num</code> <code>cast</code>
Exceptions	<code>throw</code> <code>try</code> <code>catch</code> <code>finally</code> <code>pst</code>

Arrays

Create	<code>make-array</code> <code>{object, boolean, byte, short, char, int, long, float, double}-array</code> <code>aclone</code> <code>to-array</code> <code>to-array-2d</code> <code>into-array</code>
Use	<code>aget</code> <code>aset</code> <code>aset-boolean</code> <code>aset-byte</code> <code>aset-short</code> <code>aset-char</code> <code>aset-int</code> <code>aset-long</code> <code>aset-float</code> <code>aset-double</code> <code>aset-length</code> <code>aset-map</code> <code>aset-reduce</code>
Cast	<code>booleans</code> <code>bytes</code> <code>shorts</code> <code>chars</code> <code>ints</code> <code>longs</code> <code>floats</code> <code>doubles</code>

Proxy

Create	<code>proxy</code> <code>get-proxy-class</code> <code>construct-proxy</code> <code>init-proxy</code>
Misc	<code>proxy-mappings</code> <code>proxy-super</code> <code>update-proxy</code>

Other

XML	<code>clojure.xml/parse</code> <code>xml-seq</code>
REPL	<code>*1</code> <code>*2</code> <code>*3</code> <code>*e</code> <code>*print-dup*</code> <code>*print-length*</code> <code>*print-level*</code> <code>*print-meta*</code> <code>*print-readably*</code>
Code	<code>*compile-files*</code> <code>*compile-path*</code> <code>*file*</code> <code>*warn-on-reflection*</code> <code>compile</code> <code>gen-class</code> <code>gen-interface</code> <code>loaded-libs</code> <code>test</code>
Misc	<code>eval</code> <code>force</code> <code>hash</code> <code>name</code> <code>*clojure-version*</code> <code>clojure-version</code> <code>*command-line-args*</code>
